

SupportGPT — User Manual

Getting started guide for new users

Creating Your Account

Visit the SupportGPT login page and click 'Create one' to register. You'll need your name, a work email, and a password with at least 8 characters, one uppercase letter, and one number.

Starting a Conversation

- Click 'New Chat' in the sidebar to begin a fresh conversation
- Type your question in the message box at the bottom of the screen
- Press Enter to send, or Shift+Enter to add a new line without sending
- Responses stream in real-time, token by token

Understanding Agent Badges

Every AI response shows a colored badge indicating which specialist agent handled your question — Billing, Technical, Product, Complaint, or FAQ. Complex questions may trigger multiple agents at once, shown as multiple badges on a single response.

Managing Conversation History

- All past conversations appear in the 'Recents' section of the sidebar
- Click any past conversation to reopen and continue it
- Hover over a conversation and click the trash icon to delete it permanently

Switching Between Light and Dark Mode

Use the theme toggle at the bottom of the sidebar (sun / monitor / moon icons) to switch between Light mode, System mode (matches your device setting automatically), and Dark mode. Your preference is saved automatically.

Troubleshooting: Can't Log In

- Double check your email is typed correctly with no extra spaces
- Use 'Forgot Password' if you're unsure of your current password
- Clear your browser cache if the login page appears broken or outdated
- Contact support if the issue persists after a password reset

Troubleshooting: Slow or Missing Responses

- Check your internet connection — streaming responses require a stable connection
- Refresh the page and try sending your message again
- Very long or complex questions may take a few extra seconds to route correctly

Keyboard Shortcuts

- Enter — send message
- Shift + Enter — new line without sending
- Ctrl/Cmd + K — focus the message input box (if enabled)

SupportGPT sample knowledge base document — used to power RAG-grounded chat responses.
